
(a) 11/28 (Mon), Observed
(b) 11/28 (Mon), No control
Delay = 348 veh-hrs
(c) 11/28 (Mon), Optimal speed limit control
Delay = 224 veh-hrs, CC = 35%
(d) 11/28 (Mon), Cumulative departures
oblique at q_0 = 8,373 veh/h
demand ends
(e) 12/02 (Fri), Observed
(f) 12/02 (Fri), No control
Delay = 325 veh-hrs
(g) 12/02 (Fri), Optimal speed limit control
Delay = 46 veh-hrs, CC = 86%
(h) 12/02 (Fri), Cumulative departures
oblique at q_0 = 8,326 veh/h
demand ends
Distance (km)
Time (min)
Num. departures − $q_0 t$ (veh)
Velocity (km/hr)
Delay, no control
Delay, optimal control
Free-flow departures
No control
Optimal control
